WHO WE ARE

Our Vision & Mission

We believe every community already holds the strength to build its own future — our role is to help that strength take root. MAHM is committed to institutionalising community resilience and strengthening human capital, so families are equipped to withstand shocks instead of merely surviving them.

Our vision is simple to state and ambitious to achieve: self-reliant, gender-equitable, future-ready communities — with youth and women leading the way as the primary architects of their own change.

Women leading a household planning session — the everyday reality behind the strategy.

OUR FOUR PILLARS

What We Do

Everything we build stands on four interconnected pillars — because lasting change rarely comes from just one direction.

Inclusive Growth

We open fair pathways to economic participation, shaping each programme — integrated or stand-alone — around what a community actually needs to thrive sustainably.

Education Continuum

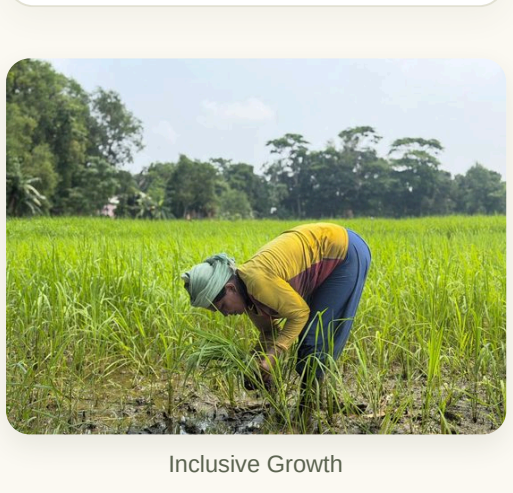
From the first day of school to lifelong learning, we work to keep the classroom door open — so no child's education is interrupted by circumstance.

Women's Livelihood & Financial Empowerment

We strengthen women's skills, income pathways, and support networks — building the financial independence that helps prevent early marriage.

Sustainable Agriculture, Fisheries & Food Security

We help farming and fishing households produce and earn more sustainably — including our local-to-global coalition work on chemicals and waste management to protect the land they depend on.



Inclusive Growth

Education Continuum

Women's Livelihood

Sustainable Agriculture

LOCAL-TO-GLOBAL COALITION · UNDER SUSTAINABLE AGRICULTURE

Chemicals & Waste Management: Tackling Agricultural Plastic Pollution

Through our local-to-global coalition on chemicals and waste management, we're tackling one of agriculture's most overlooked problems: plastic pollution left in the field. In Bangladesh, we're building a circular, commercially viable recovery system that brings farmers and the private sector into the same value chain — pairing a targeted, incentivised collection model with an AI-based decision-support tool that adjusts collection logistics and pricing in real time. The result is a verifiable chain running from farmer training all the way to final recycling. On the ground, that means measurably less plastic waste left in the field, an end to open burning, and healthier soil for the next season's harvest.

OUR PRINCIPLES

How We Work

01
Dignity First
We don't work with passive beneficiaries. Every participant is an active decision-maker — our role is to open doors, not create dependency.

02
Holistic & Systems-Based
Poverty is never just one problem. We treat education, livelihoods, health, and environment as connected parts of the same picture.

03
Multi-Generational Stewardship
Rooted in decades of continuity, we adapt every year to new challenges — from climate vulnerability to shifting local economies.

04
Mastery in Servitude
Our guiding philosophy: excellence only means something when it advances the sustainable development of the most marginalised.

OUR STORY

Where It Began

MAHM's story began with one head teacher's insight. Moulovi Abdul Hye, a dedicated primary school teacher, and his son Ali Azam — an engineer and Liberation War veteran — saw clearly what many still overlook: that education and poverty are inseparably linked.

That conviction led them to found their first school in 1996, and two years later, in 1998, to formally establish the Trust that carries their vision forward today — still rooted, generation after generation, in local empowerment.

> ***"Mastery in Servitude."***
> The philosophy at the heart of everything we do: excellence is only meaningful when it advances the lives of the most marginalised.

THE EVIDENCE BEHIND THE WORK

Our Impact

Every priority, taka, and programme decision here traces back to one source: a baseline assessment of 150 households across Muksudpur Upazila.

WHERE THE NEED IS GREATEST

Sector Risk Priority Matrix

Synthesised from our household assessment, this data dictates exactly where our resources go — and where they don't, yet.

Water Security	78%	Critical · Quality Crisis
Digital Access & Assets	58%	High · Structural Barrier
Income Security	56%	High · Precarity
Savings & Financial Resilience	56%	High · Insolvency
Sanitation	55%	High · Structural
Healthcare	53%	High · Capital Erosion
Housing & Structural Safety	51%	High · Climate Risk
Food Security	49%	Monitor
Education	35%	Core
Income Diversification	27%	Core

While Digital Access rates "Moderate" on the composite scale, the **47.3% total lack of connectivity** represents a foundational bottleneck — a structural barrier to financial inclusion, educational continuity, and remote economic participation.

The Quality-Over-Proximity Crisis

Water insecurity is a crisis of quality, not geography.

93.3%
have a water source within 100 metres

88.7%
of those sources are unsafe

This "proximity trap" masks a deep public health crisis — which is why water security is our foundational strategic priority.

The Debt-Financed Survival Trap

The target population is trapped in mathematical insolvency.

৳142,299
mean household debt

৳120,000
median annual income

A net annual deficit of ৳22,299 per household. With 82.7% holding zero savings, families are forced into high-interest debt just to survive.

COMPOUND VULNERABILITY

Deprivation Is Multi-Layered

Isolated, siloed interventions fail the households facing compound vulnerability across many sectors at once — so we don't design them that way.

16.7%	50.6%	32.7%
0–2 high-risk sectors Low compound vulnerability	**3–6 high-risk sectors** Moderate–High compound vulnerability	**7+ high-risk sectors** Severe–Extreme compound vulnerability

RETURN ON INVESTMENT

The Virtuous Cycle

A single, one-time investment in water quality directly mitigates the primary driver of medical distress — and the return compounds.

৳9,370
one-time investment in water quality, per household

3.7×
annual return on that investment

৳34,739
in household capital freed from healthcare costs

OUR LOGIC MODEL

How Change Happens

1
Basic Needs
Stabilise safe water, nutrition, and storm-resistant housing to mitigate the shocks that drain limited capital.

→

2
Skills & Market Access
Market-driven skills and value-chain training let households diversify income beyond the 72.7% single-source dependency.

→

3
Financial Inclusion
Moving from predatory debt to formal savings and tailored products secures liquidity for long-term investment.

→

4
Gender Empowerment
Socio-economic empowerment and community sensitisation grow women's control over household resources.

> *"Targeted, multidimensionally poor women and households sustainably build resilience against future economic, social, and climatic shocks — transitioning from survival mode to graduation status."*

BY 2031

Strategic Objectives

Economic Stability

Diversify income to eliminate the 72.7% single-source dependency and bridge the ৳22,299 annual income-to-debt deficit.

Access to Basic Needs

Eradicate arsenic exposure and mitigate the ৳34,739 annual medical expenditure through preventative water security.

Future Prospects

Sustain educational attainment and measurably reduce social precarity and early marriage.

PROOF OF CONCEPT

Our Pilot Programmes

PILOT 1

Education & Digital Literacy

Objective: Stabilise the Education Continuum and bridge the digital divide.

Vulnerability: 25.2% irregular attendance; 47.3% lack of connectivity.

Activities: IT assets, digital literacy training, financial-barrier removal (৳16,247/child/year).

PILOT 2

Sustainable Livelihood Graduation

Objective: Institutionalise income diversification through demand-driven pathways.

Vulnerability: 72.7% single-source dependency; 48.7% precarious day labour.

Activities: Livestock rearing and sewing/tailoring — requested by 37% of respondents.

PILOT 3

Water Security & Health Resilience

Objective: Mitigate systemic capital leakage caused by chronic disease.

Vulnerability: 78% water risk; 44% chronic disease prevalence.

Activities: Safe water filtration and integrated chronic-disease management.

PILOT 4

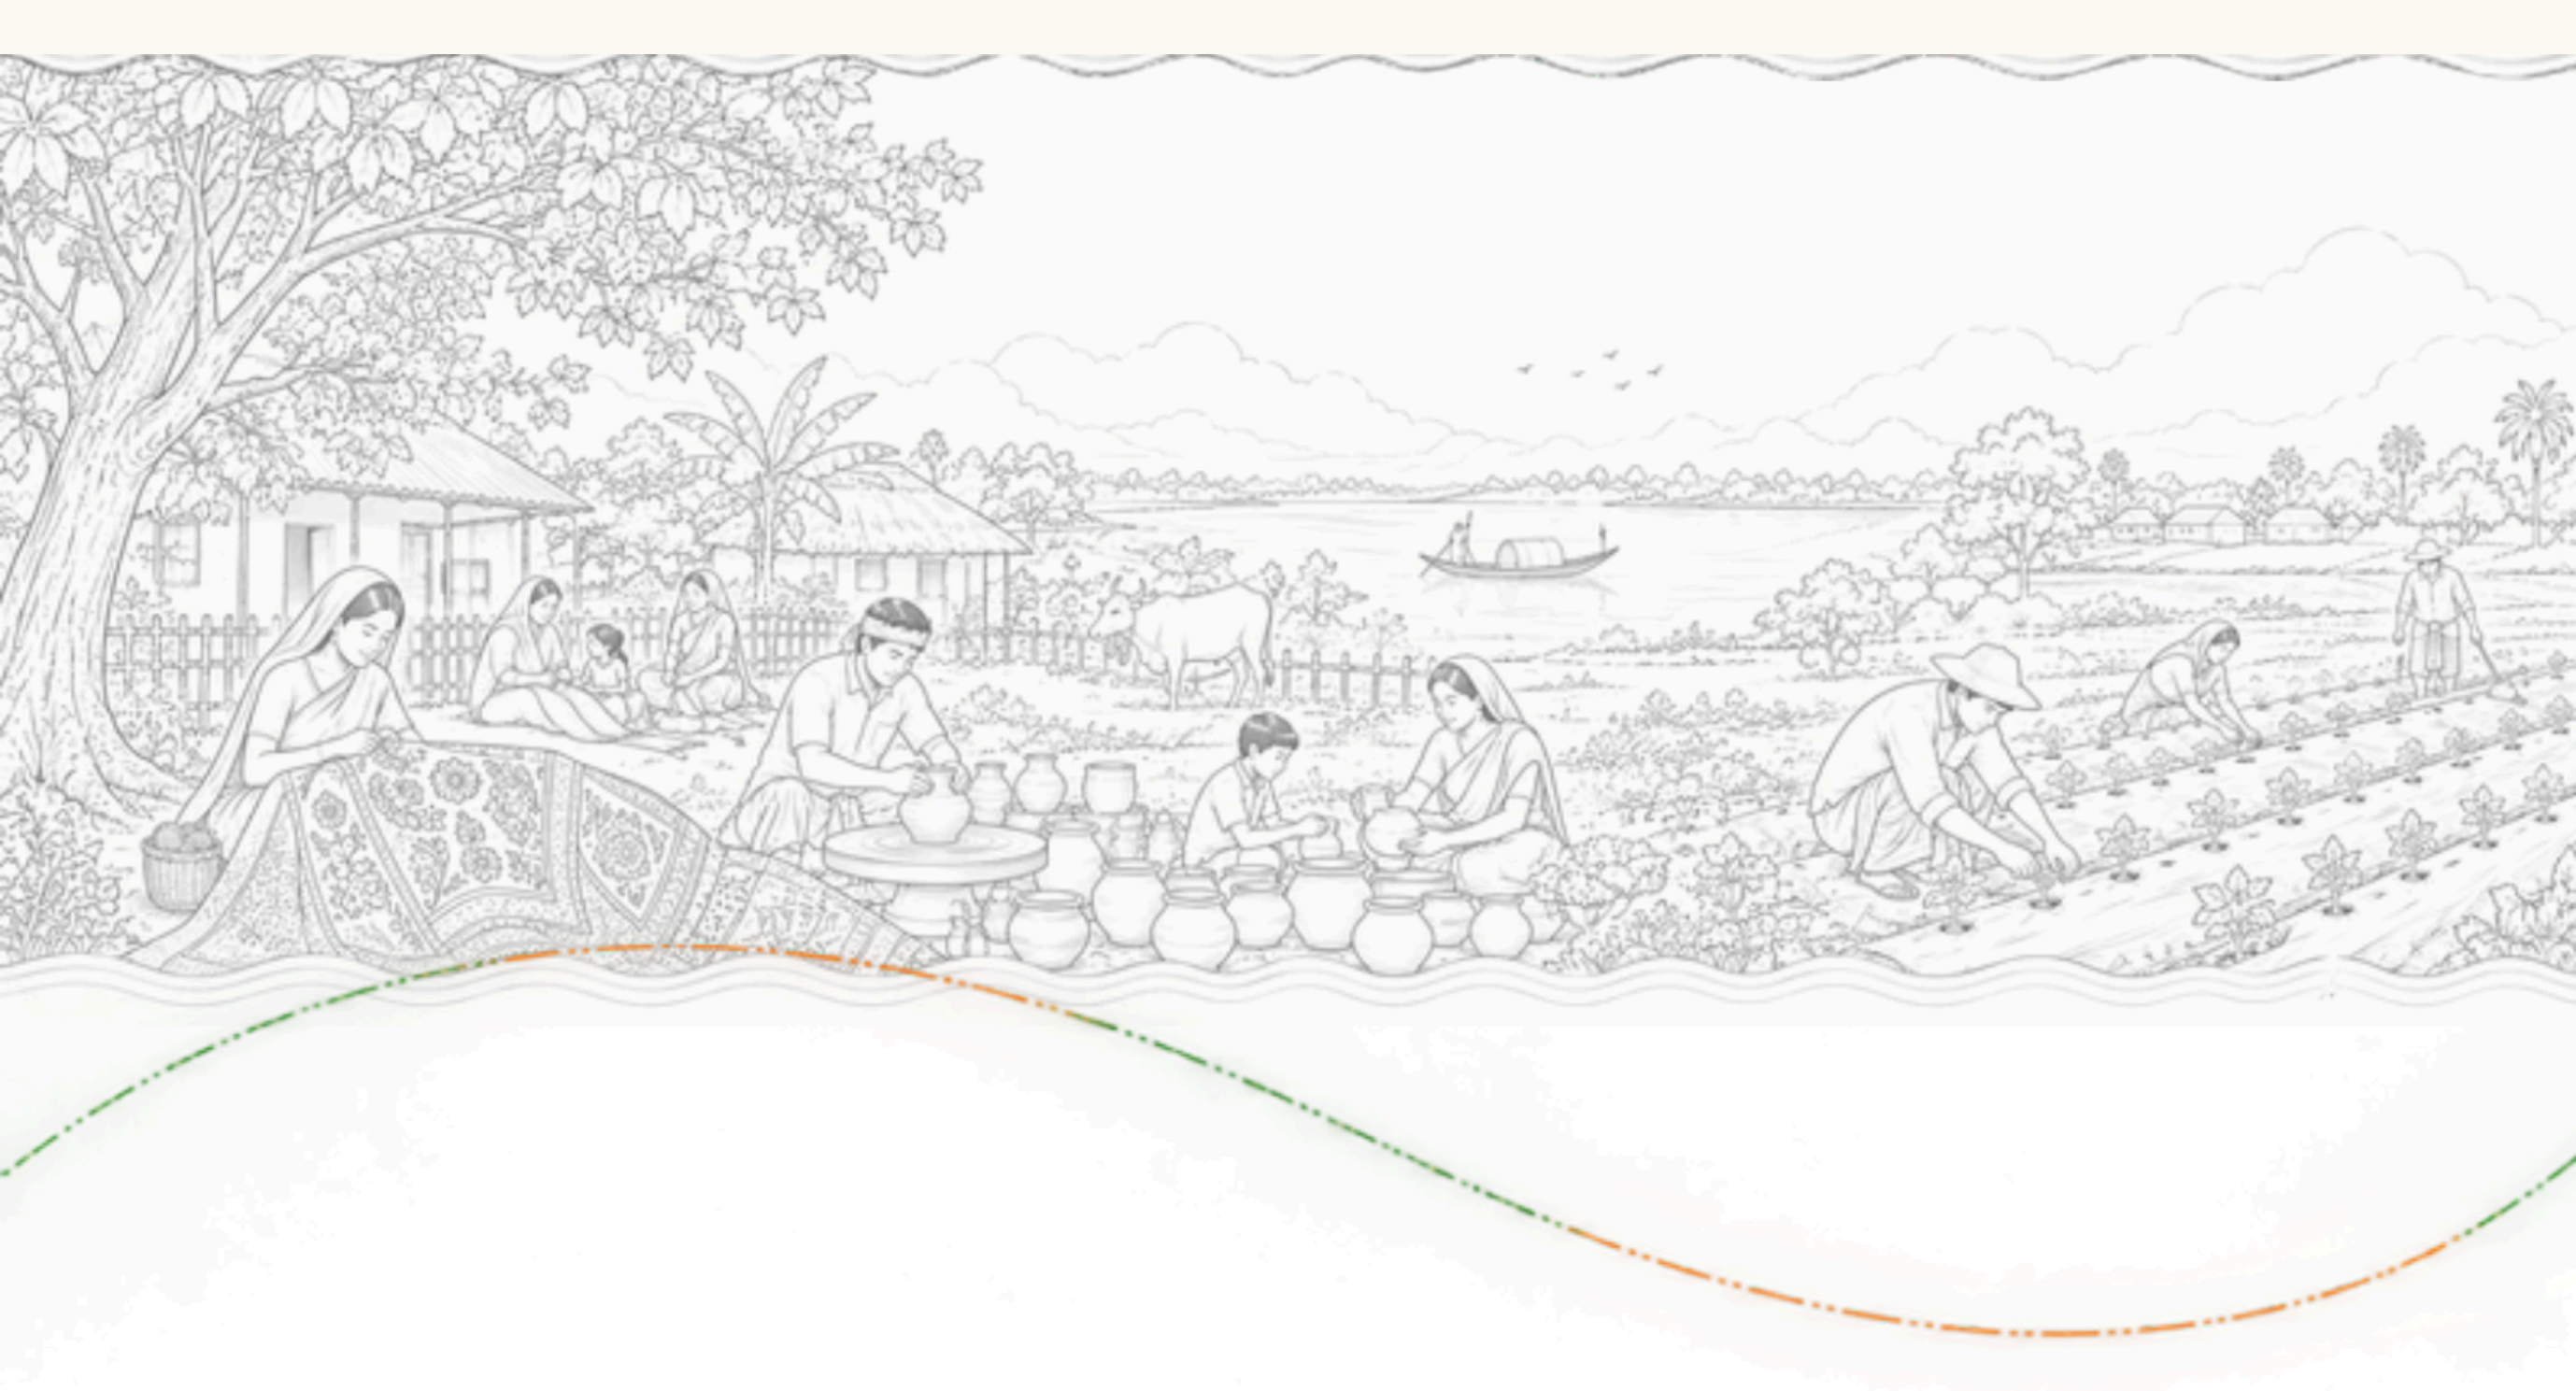
[Add Name & Description]

Your notes mention a fourth pilot but don't spell out its objective, vulnerability, or activities yet.

MEASURING WHAT MATTERS

Key Performance Indicators

CATEGORY	QUANTITATIVE INDICATOR	QUALITATIVE INDICATOR
Resilience	% reduction in household debt-to-income ratio	Increase in self-reported social belonging
Education	% increase in regular school attendance	Documented reduction in early marriage risk
Health	% decrease in annual medical expenditure	Improved self-reported physical well-being
Agency	% increase in women's control of household resources	Increase in self-reported autonomy / dignity



DIGNITY FIRST CRITERIA

Who We Prioritise

PRIORITY GROUP	DATA-DRIVEN JUSTIFICATION
Widowed / Female-Headed	13.3% of households — acute single-earner dependency and social isolation.
The Debt-Insolvent	Households with zero savings (82.7%) and debt exceeding annual income.
Climate-Vulnerable	62% of households residing in non-storm-resistant structures.
Medical Distress	44% household prevalence of heart disease, stroke, or respiratory illness.
Large / Dependent Households	Families with 4+ children or high elderly-dependency ratios.

Empowered families become models of resilience — a critical mass of "graduated" households creates a ripple effect that strengthens community citizenship and collective decision-making.

PLANNING FOR WHAT COULD GO WRONG

Risk & Mitigation

IDENTIFIED RISK	EVIDENCE	MITIGATION STRATEGY
Unsafe drinking water	88.7% of sources are contaminated despite proximity.	Prioritise arsenic-free deep tubewells / filtration.
Climate shocks	62% of housing stock is not storm-resistant.	Transition to climate-resilient semi-permanent housing.
Systemic insolvency	Mean debt (৳142k) exceeds median income (৳120k).	Institutionalise savings groups; graduation grants over micro-credit.
Chronic disease burden	44% prevalence of heart disease, stroke, or respiratory illness.	Establish community-based health support.

TRANSPARENCY

What It Costs to Change a Trajectory

ASSESSMENT FINDING	PROGRAMMATIC RESPONSE	MEAN COST (BDT)	COST TYPE
Water Security Risk	Arsenic-free tubewells / filters	৳9,370	One-time
Healthcare Distress	Chronic disease support / clinics	৳34,739	Annual / recurrent
Structural Housing Risk	Storm-resistant repairs	৳65,802	One-time
Digital Exclusion	IT assets and connectivity	৳46,169	One-time
Education Cost Burden	Enrolment / attendance subsidies	৳16,247	Annual (per child)

JOIN US

Get Involved

Whether you give, volunteer, or simply share our story — every bit of support strengthens the communities we serve.

Donate

Your gift funds a specific, costed intervention — from a ৳9,370 water filter to a ৳16,247 year of schooling.

Donate Now

Volunteer

Bring your skills to our pilots on the ground — from digital literacy training to livelihood coaching.

Apply to Volunteer

Partner

We work best in coalition — local and global. If your organisation shares our focus, let's talk.
